

Choosing the Wrong Water Filter is Risky Business

Dangers of Using Counterfeit Filters:

Failure to remove contaminants from your drinking water such as lead, mercury, pesticides, asbestos and pharmaceuticals.

Damage to your refrigerator or kitchen caused by a leak from an improperly fitted filter.

Any damages caused by counterfeit filters may not be covered by your refrigerator warranty.

How Do You Avoid a Counterfeit?

Packaging

Many counterfeits reflect older or discontinued packaging and model numbers. Visit EveryDropWater.com to view the latest packaging.

Cost

Phony filters are often sold online for a fraction of the price of brand-name filters. If the cost of the filter seems too good to be true, it just might be!

Shipping Location

All approved EveryDrop® filter retailers are based in the United States. If your package is shipping from outside the United States, you may not be receiving a legitimate filter.

EveryDrop® is the only filter approved by these brands of refrigerators:

Whirlpool®

MAYTAG®

KitchenAid®

AMANA®

JENNAIR®

The only way to confidently choose a filter that fits your refrigerator and works as intended is to purchase directly from an approved retailer.
